FROM: $\begin{aligned} & \text { Sandra M. Russell, Police Administrator } \\ & \text { Commanding Officer, Facilities Management Division } \\ & \text { Los Angeles Police Department }\end{aligned}$
SUBJECT: PROGRESS REPORT ON THE INSTALLATION OF ELECTRIC VEHICLE CHARGERS AT LAPD FACILITIES

## Recommendation

That the Municipal Facilities Committee note and file this report.

## BACKGROUND.

The Los Angeles Police Department (LAPD) made an initial installation of 104 Electric Vehicle (EV) Chargers at the Motor Transport Facility located at 260 South Main Street in May of 2016, to support the initial lease of 100 fully electric administrative support vechicles which were leased as part of a planned multi-year electrification of the Department's non-emergency response fleet. Due to a lack of chargers in other locations in the City, the LAPD embarked on an aggressive campaign to install chargers at all Area stations and other core facilities to increase the range and functionality of the 200 EV .

## BUDGET EXPENDITURES AND REQUESTS

| Funding Provided FY 15/16 | $\$ 1.47 \mathrm{mil}$ |
| :--- | ---: |
| Funding Provided FY 16/17 | $\$ 1.62 \mathrm{mil}$ |
| Funding Provided FY 17/18 | $\$ 2.65 \mathrm{mil}$ |
| Funding Provided FY 18/19 | $\$ 2 \mathrm{mil}$ |
| Funding Provided FY 19/20 | $\$ 1 \mathrm{mil}$ |
| Funding Provided FY 20/21 | $\$ 0 \mathrm{mil}$ |
| Total | $\$ 8.74 \mathrm{mil}$ |
|  |  |
| COSTS: | $\$ 1.47 \mathrm{mil}$ |
| Main Street Chargers | $\$ 1.62 \mathrm{mil}$ |
| Phase II | $\$ 1.85 \mathrm{mil}$ |
| Phase III - B Sites | $\$ 3.65 \mathrm{mil}$ |
| Phase III - A Sites | $\$ 3.15 \mathrm{mil}$ |
| Phase IV - Proposed Cost | $\$ 11.74 \mathrm{mil}$ |
|  |  |
| Total |  |

SCHEDULE OF INSTALLATION

| LOCATION | \#DCFC <br> FLEET | $\begin{gathered} \text { \#L2? } \\ \text { FLEET } \end{gathered}$ | DATE OF INSTALLATION | 新 2 CEG PUBLIC | DANE OF 1HSTALLATION |

| $\ddagger$ These sites require DWP Equipment upgrades and have completed or are under construction. |  |  |  |  |  |
| $\infty$ These sites require additional power poles and DWP Equipment upgrades which is a time consuming process that can have a duration of up to 3 years to complete. |  |  |  |  |  |
| O Seven L2 chargers were installed when the station was built, 15 additional chargers have been added in 2020 as part of the parking structure project. |  |  |  |  |  |
| \# L2 CEC Public - California Energy Commission Grant Funded Publicly Accessible EV Chargers. All available DWP grant funding were utilized and expended. |  |  |  |  |  |

## CURRENT STATUS AND CHALLENGES.

The LAPD has made substantial progress installing EV Chargers, working with the Bureau of Engineering, the Department of Water and Power and the City's current vendor, Green Lots. Of the 26 locations scheduled for the initial deployment of EV Chargers, only three are currently waiting for installation activities to commence. These facilities pose the most significant challenges, with three sites needing additional power transformers installed and two requiring additional power lines.

The design work necessary for the transformer upgrades and power lines are being completed by DWP engineers who are actively participating in the projects. The design work for the three transformer upgrades are being completed and equipment has been ordered. Construction plans are being submitted for Bureau of Engineering and Building and Safety review. The three additional facilities require substantially more detailed design as these projects require the placement of power poles and pulling additional power to the site. However upon further investigation, one of these sites was found to be cost prohibitive to proceed with power line extension. LAPD will proceed with a transformer installation that will provide sufficient power for current needs; however, it will result in limiting future expansion. The DWP cost estimates for the installation of the additional power were estimated to be between $\$ 500,000$ to $\$ 610,000$ for each site, however, as DWP progress with site assessments, the costs could potentially range from $\$ 450,000$ to $\$ 1.7$ million. The initial estimates were provided by DWP were based on standard distance calculations and did not account for topographic constraints to meet the infrastructure requirements. The increase in costs requires utilizing funds from Phase 4 in order to complete Phase 3. Funding will need to be available to pay for the DWP work prior to issuing a notice to proceed for construction.

Although the City enters uncharted territory with the COVID-19, work continues with extra precautions being taken including social distancing. At this time, some minor delays have been experienced. Additional delays are anticipated due to various Departments' budget reductions, possible furloughs and retirements which will reduce the availability of staffing to assist in the timely completion these projects.

## FUTURE GROWTH

With the completion of the on-going installation projects, the LAPD will have met its basic need to be able to deploy Electric Vehicles and continue the electrification of the non-emergency response fleet. With the direction from the Mayor's Office and the Governor's 2035 zero emission order, increased usage of fully electric vehicles and the constantly growing capacity of batteries, the LAPD will need to continue the development and growth of the power infrastructure and capacity of EV Chargers being installed. Currently, the DC Fast Chargers are rated at 50 kw . The next phase of growth for LAPD facilities, once funding is identified, will be to upgrade power to the facilities and evaluate back-up power source capabilities. This will be necessary to efficiently charge light and heavy-duty trucks, transport vehicles, and eventually fully electric emergency response vehicles. If funding is not identified, it will limit the future deployment of Electric Vehicles in the Department. This will delay the Department's progress towards the zero emission vehicles goals, due to limited availability of high-powered chargers to meet both City and vehicle requirements.

Where possible, the Department has installed infrastructure that will support the additional and larger capacity chargers knowing that the demand and technology will continue to develop. The Department will continue to request funding through the budget process to increase capacity and build an infrastructure that will allow the Department to achieve the increasing goals set by the Mayor's Office in the Green New Deal and the Governor's Executive Order N-79-20 for zero emission vehicles.
